

FCC Members:

I use the GPS system daily on my smart phone, vehicle navigation system, the chart plotter on my boat and occasionally as I fly for a Part 135 air charter company. I find that while mobile broadband can be very handy, it has never been a life or death matter if I don't have it. On the other hand there have been occasions when an interruption of the GPS signal could have been a life or death matter.

Please do not approve any system that could interfere with GPS navigation.

I wholehearted support you latest action to withdraw approval of Light Squared's system, since all studies seem to indicate that it would interfere with GPS system.

Thank you for allowing me to comment:
